Renault Clio 172/182 Brembo 4 piston calliper 280mm brake calliper machining.

First of all machine 1mm off the mounting pads of the brake calliper on the bracket side. Then machine two recesses as shown on the attached drawing. The idea is to get one spigot a nice sliding fit to locate the calliper and one with some clearance otherwise the calliper becomes very hard to remove from the bracket. Chamfer around the top of the recess by 2mm to clear the 1.5mm rad on the brake bracket.

If you get stuck please ring for help and advice.
